

Sounds so good, you don't have to

DMNO is an 8-voice, 2-part multitimbral powerhouse with a highly flexible and dynamic signal architecture.

It features two independent 4-voice analog-hybrid synthesizers, each equipped with our new *Dynamic Multi-Core Stereo Analog Filter System*.

With its eight creative *Play Modes*, DMNO unlocks dynamic interactions between the two timbres at the touch of a single control, while its *flexible analog and digital audio connectivity* makes it a truly expansive and immediate sound design sandbox.
